

Relentless Intrusion Detection (RID) powered by Alert Logic®

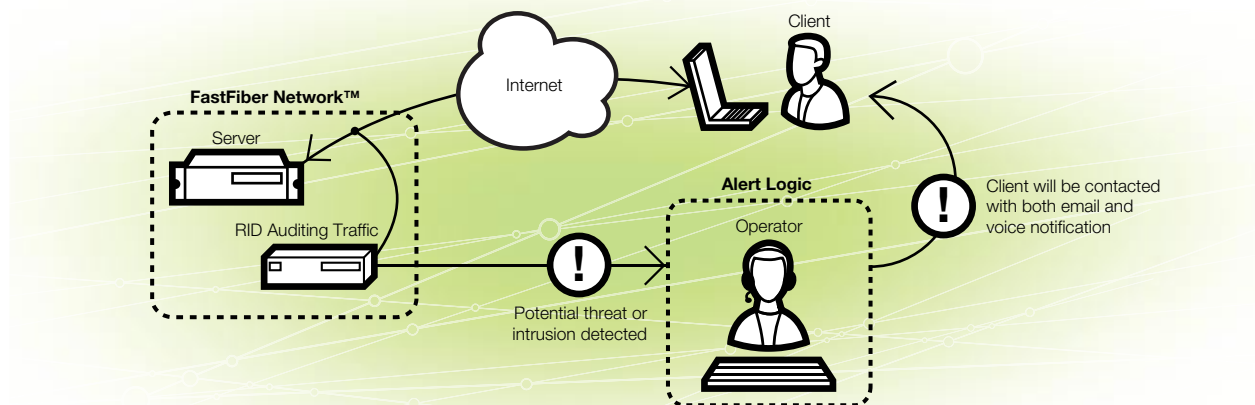

Defend your network against internal and external threats.

Cloud-Based Intrusion Detection – No Network Impact – No Capital Investment

As network attacks become more sophisticated, IT organizations like yours face escalating challenges to effectively secure their networks. In addition, compliance requirements are more demanding, driven by several factors including growing financial dependence on application software and data, increasingly sophisticated criminal activity, and escalating regulations designed to safeguard and protect electronic assets.

ROUND-THE-CLOCK THREAT DETECTION

PEER 1 Hosting delivers **Relentless Intrusion Detection (RID)** powered by Alert Logic®. RID leverages patented, cloud-powered expert technology to automatically identify behavior patterns missed by most stand-alone and traditional network security products. With RID in place, you'll be instantly alerted if human attackers, network worms and bots are at work. This allows you to respond quickly and block them before they become network-wide threats.

Alert Logic is a PCI Security Standards Council Approved Scanning Vendor (ASV)

Patented 7-Factor Threat Scenario Modeling reduces false positives and improves threat detection

Global threat visibility incorporates thousands of sensors into the patented intrusion detection decision process

45 dashboards and hundreds of reports manage the effectiveness of security and compliance programs

24x7x365 Security Operations Center (SOC) staffed with GIAC-certified analysts handle all security incidents and provide expert guidance for remediation

BENEFITS

No Impact on Your Network. RID observes your network traffic from off to the side, not in-line. This means that it operates without ever impacting your traffic by creating bottlenecks, points of failure or downtime.

Maintain Compliance. Maintain compliance through regular testing of security systems and processes with pre-configured quarterly scans, the results of which serve as proof of compliance to acquiring banks or Qualified Security Assessors (QSA).

BENEFITS *continued from previous page*

Minimal Investment. PEER 1 Hosting makes implementing security and compliance solutions simple by offering RID in a service-based delivery model. This cloud-based model means you don't have to buy, implement or maintain the expensive and complicated hardware and software usually associated with intrusion detection and vulnerability assessment.

Infrastructure Integration. RID integrates with leading infrastructure products to block potentially malicious activity, stopping attacks such as unauthorized log in attempts and remote command execution.

Full Reporting. Use 45 dashboard widgets and over 100 reports to manage the effectiveness of your security and compliance programs. All reports can be customized to meet your unique needs and are available on-demand or on a scheduled basis with reports delivered via email.

Always Vigilant. We enhance our intrusion detection capabilities by providing round-the-clock expert analysis and insight on real-time threat alerts, so you can quickly resolve incidents and get focused back on your business.

Assess Vulnerabilities. Regularly scan internal and external networks—whenever and as often as you choose—to determine where your organization is vulnerable. Once identified, security experts provide the knowledge and guidance to help you proactively defend your network by remediating vulnerable assets.

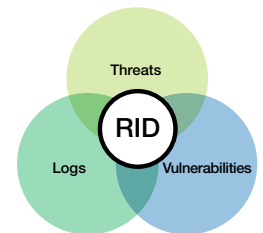

Patented Software. RID utilizes a combination of a patented grid-based technology and cutting edge 7-factor threat scenario modeling to accurately identify and prioritize threats in your environment.

Security Operations Center. A Security Operations Center staffed by highly skilled security experts with Global Information Assurance Certification (GIAC) by the SANS Institute who, through the ActiveWatch service, provide 24x7x365 monitoring and incident response at a fraction of the cost of employing these skills in-house.

Complete Threat Visibility. RID uniquely sits at the nexus of threat, vulnerability and log data within your network. This gives us unparalleled visibility to accurately identify and prioritize security incidents based on a complete picture that cannot be matched by off-the-shelf software.

Blazing FastFiber Network™. Our FastFiber Network™ ensures the optimal performance and security of your hosting infrastructure. All 17 of our data centers and all 21 points of presence are connected over 13,000 miles of fiber through a series of dedicated links. We strengthen that with peering relationships with over 1,050 networks and multiple Tier 1 upstream providers. This ensures faster performance for your websites and applications—backed by our zero network downtime guarantee.

Unlimited FirstCall Support™. FirstCall Support means you have to make only one call to us to be certain of a rapid resolution. We do that through our talented support team, formed of Level II and III system administrators with an average of five years tenure with us. And that team is available to all our Managed Hosting customers, every minute of every day.
